

Backend & DB Project Structure

Linux / Mac to create Structure

Create the directory structure

```
mkdir -p src/api/v1/endpoints src/core src/models src/schemas src/services tests alembic
```

Create the essential files

```
touch src/main.py src/api/v1/deps.py src/core/config.py src/core/security.py
```

```
touch pyproject.toml Containerfile .env .gitignore
```

Windows to create Structure

```
mkdir src
```

```
mkdir src\api
```

```
mkdir src\api\v1
```

```
mkdir src\api\v1\endpoints
```

```
mkdir src\core
```

```
mkdir src\models
```

```
mkdir src\schemas
```

```
mkdir src\services
```

```
mkdir tests
```

```
mkdir alembic
```

```
type nul > src\main.py
```

```
type nul > src\api\v1\deps.py
```

```
type nul > src\core\config.py
```

```
type nul > src\core\security.py
```

```
type nul > pyproject.toml
```

```
type nul > Containerfile
```

```
type nul > .env
```

```
type nul > .gitignore
```

Configure Your Git Identity

```
git config --global user.name "your-github-username"  
git config --global user.email "your-email@example.com"
```

Clone Backend

```
git clone https://github.com/Reiyonnaise/MF\_Purchase\_Optimizer\_FE.git
```

Clone Frontend

```
git clone https://github.com/oligo434/MF\_Purchase\_Optimizer\_BE.git
```

How to check current branch

```
git branch
```

Create a new branch

```
git checkout -b branch-name
```

Switch between branches

```
git checkout main  
git checkout dev
```

Add and Commit your code

```
git add .  
git commit -m "your message"
```

Push your branch to GitHub

```
git push --set-upstream origin dev
```

Push to GitHub

```
git push
```

Pull latest updates from your branch

Example: merge dev → main

```
git checkout main  
git pull  
git merge dev  
git push
```

Get code from another branch

```
git checkout dev  
git pull origin main
```

or rebase (cleaner):

```
git checkout dev  
git pull --rebase origin main
```

List ALL branches

```
git branch -a
```

Delete a branch (local)

```
git branch -d dev
```

Force delete:

```
git branch -D dev
```

Delete a branch (remote)

```
git push origin --delete dev
```
